

# Лабораторная работа №1 и №2

Установка и конфигурация операционной системы на виртуальную машину и управление версиями

---

Кекишева А.Д.

09 сентябрь 2023

Российский университет дружбы народов, Москва, Россия

Докладчик

■ Кекишева Анастасия Дмитриевна

- Бизнес-информатика
- Кафедра теории вероятности и кибербезопасности
- Российский университет дружбы народов
- 1032201194@pfur.ru
- <https://github.com/adkekisheva>

- Приобретение практических навыков установки операционной системы на виртуальную машину, настройки минимально необходимых для дальнейшей работы сервисов.
- Изучение идеологии и применение средств контроля версий.

## Задание к 1-ой лабораторной:

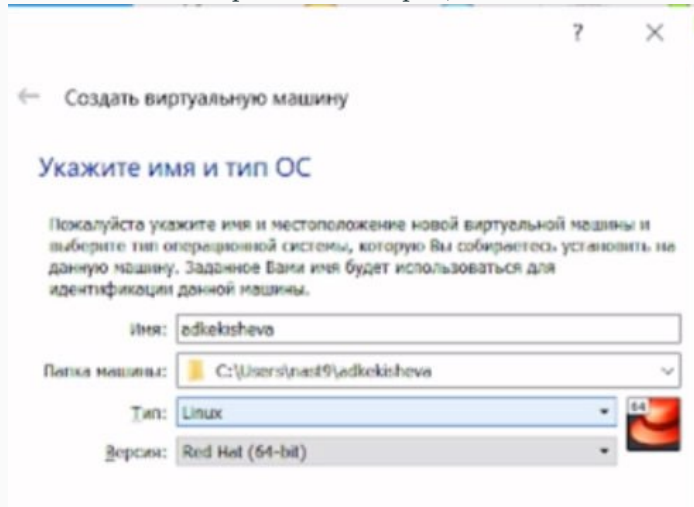

Получить следующую информацию: - Версия ядра Linux (Linux version). - Частота процессора (Detected Mhz processor). - Модель процессора (CPU0). - Объем доступной оперативной памяти (Memory available). - Тип обнаруженного гипервизора (Hypervisor detected). - Тип файловой системы корневого раздела.

## Задание к 2-ой лабораторной:

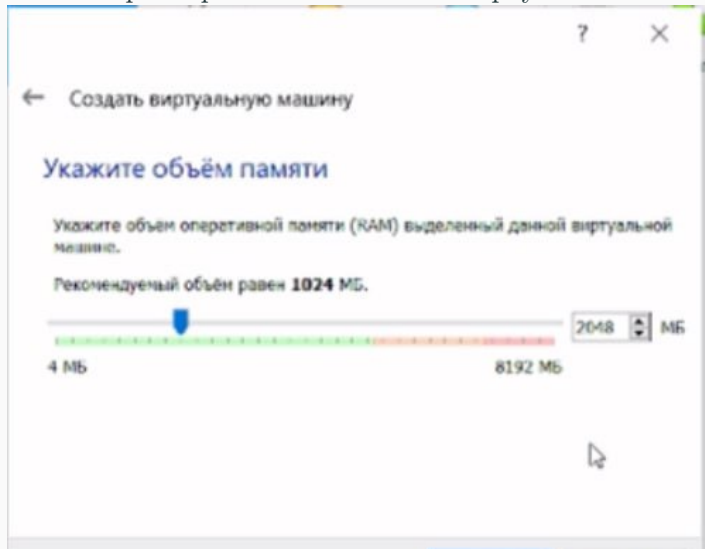

- Создать базовую конфигурацию для работы с git.
- Создать ключ SSH .
- Создать ключ PGP .
- Настроить подписи git.
- Зарегистрироваться на Github .
- Создать локальный каталог для выполнения заданий по предмету.

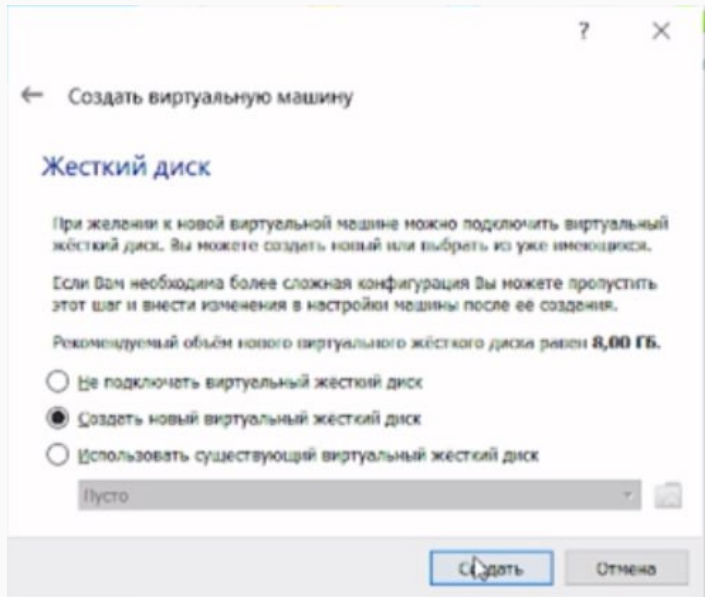

## Выполнение лабораторной работы №1 - Шаг 1

Создала новую виртуальную машину, указала имя виртуальной машины – adkekisheva. Выбрала тип операционной системы — Linux, RedHat.

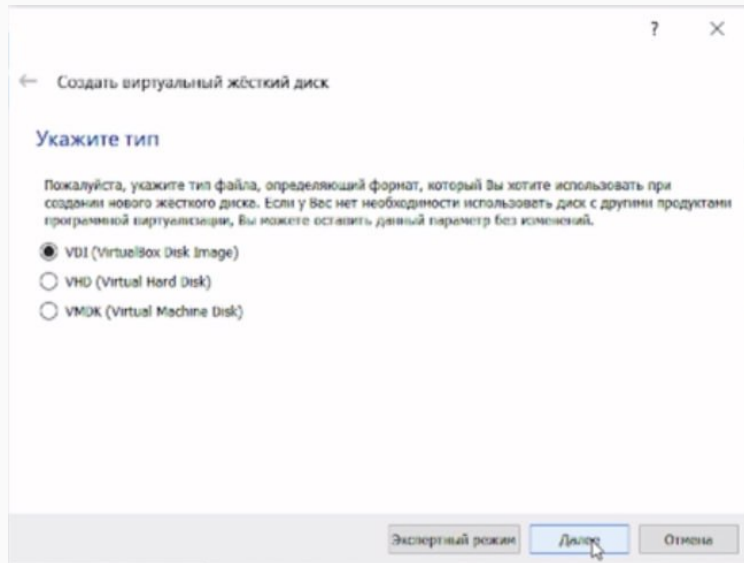

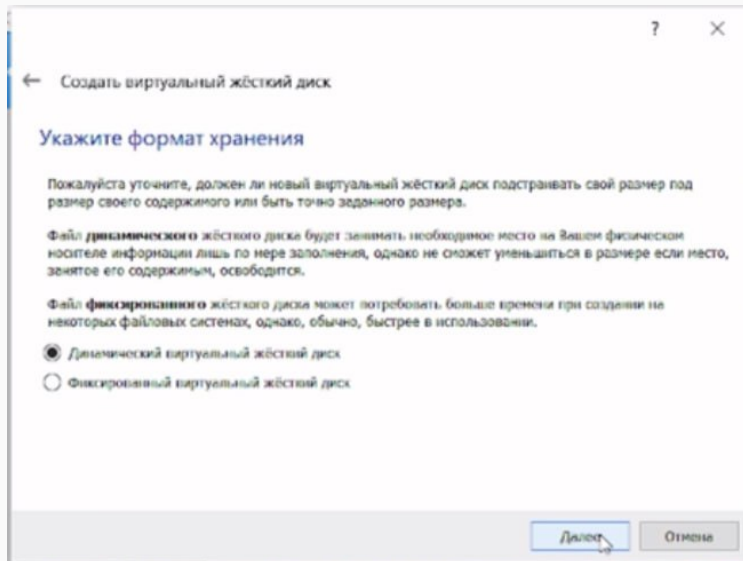

Указала размер основной памяти виртуальной машины — 2048 МБ.

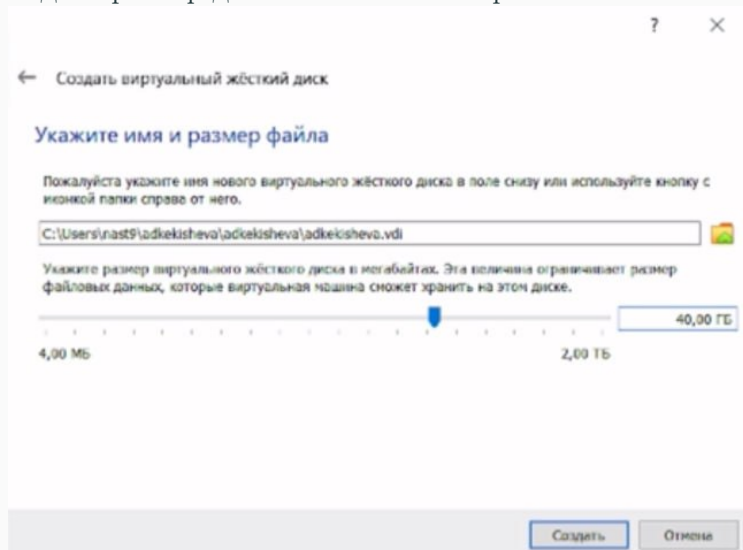

Задала размер диска — 40 ГБ и его расположение.

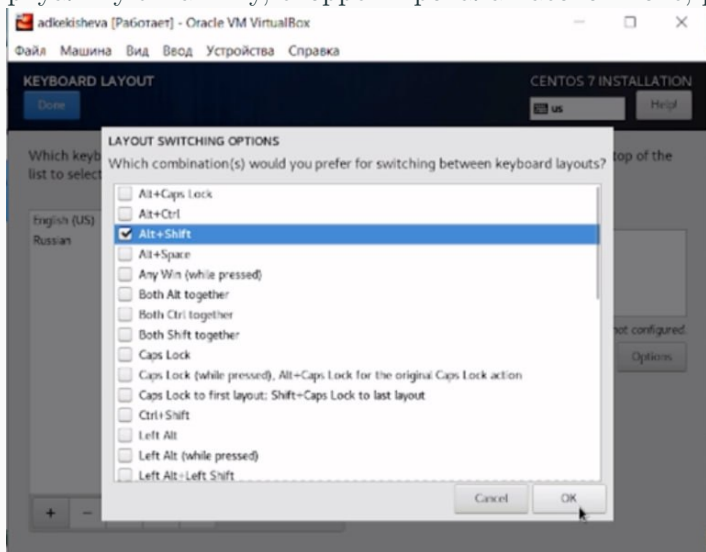

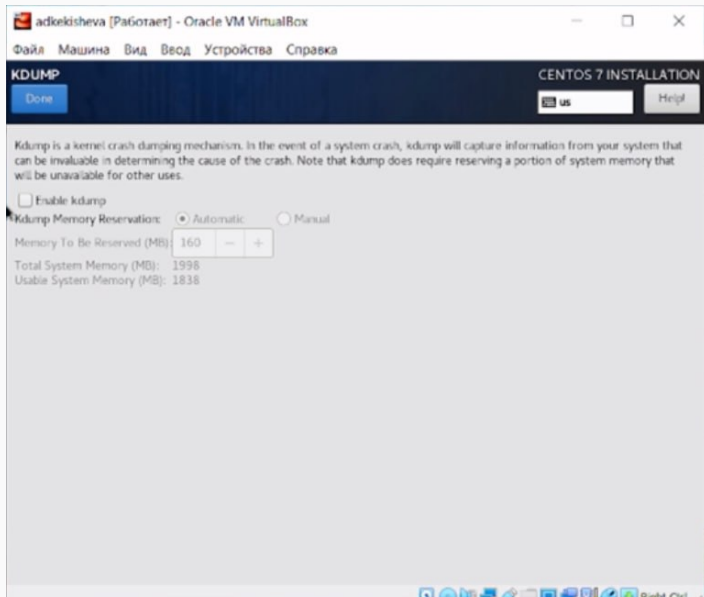

Добавила новый привод оптических дисков и выбрала образ операционной

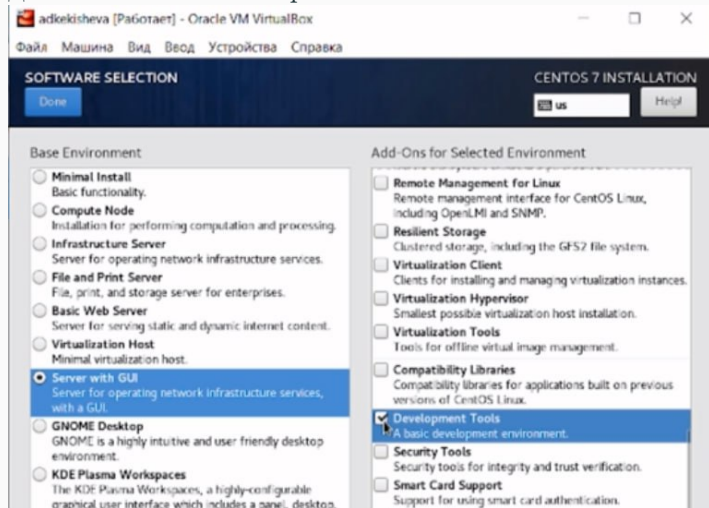

СИСТЕМЫ.

Запустила виртуальную машину, скорректировала часовой пояс, раскладку

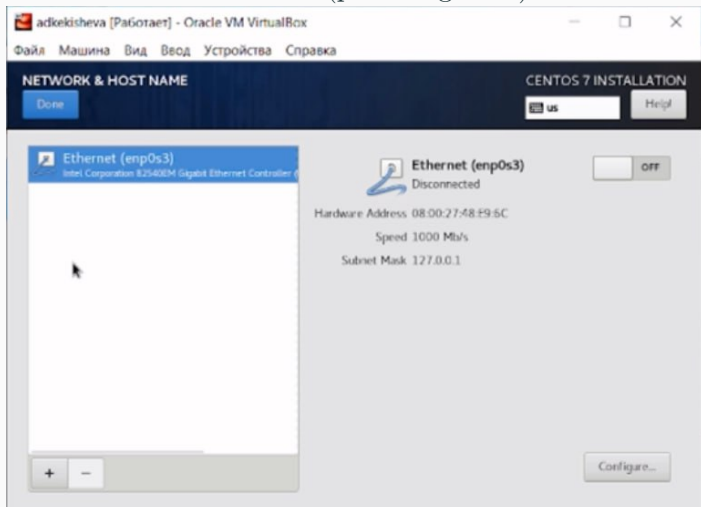

Указала в качестве базового окружения Server with GUI , а в качестве дополнения — Development Tools.

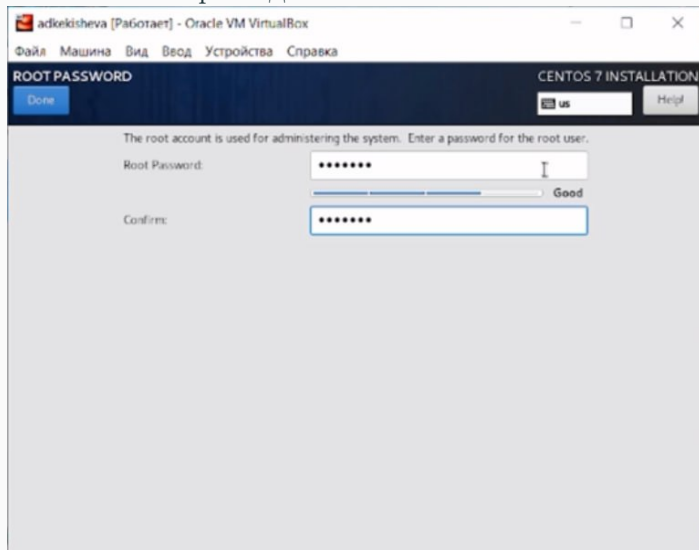

Включила сетевое соединение и в качестве имени узла указала adkekisheva.localdomain (рис. @fig:0011).

Установила пароль для root.

Установила пользователя с правами администратора.

adkekisheva [Работает] - Oracle VM VirtualBox

## Шаг 13

Вошла в ОС под заданной учётной записью и установила драйверы.

Выполнила команду dmesg в консоли.

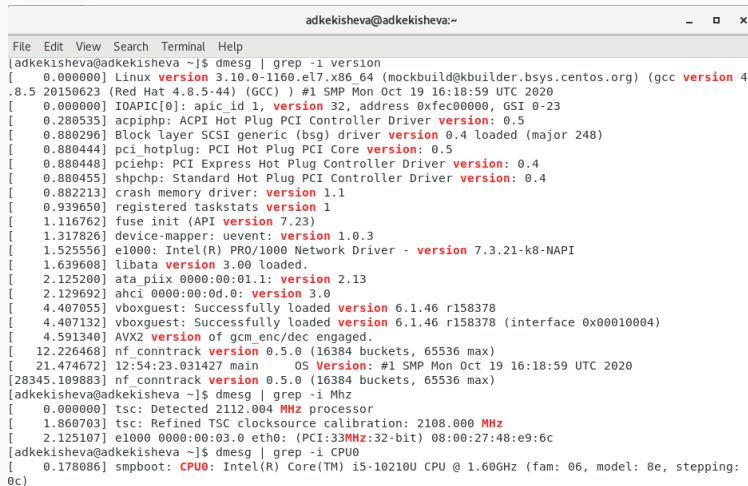

```

adkekisheva@adkekisheva:~

[adkekisheva@adkekisheva tmp]$ sudo ./gitflow-installer.sh install stable

We trust you have received the usual lecture from the local System
Administrator. It usually boils down to these three things:

    #1) Respect the privacy of others.
    #2) Think before you type.
    #3) With great power comes great responsibility.

[sudo] password for adkekisheva:
Sorry, try again.

[adkekisheva@adkekisheva tmp]$ gpg --gen-key
gpg (GnuPG) 2.0.22; Copyright (C) 2013 Free Software Foundation, Inc.
This is free software: you are free to change and redistribute it.
There is NO WARRANTY, to the extent permitted by law.

Please select what kind of key you want:
  (1) RSA and RSA (default)
  (2) DSA and Elgamal
  (3) DSA (sign only)
  (4) RSA (sign only)
Your selection? 1
RSA keys may be between 1024 and 4096 bits long.
What keysize do you want? (2048) 4096
Requested keysize is 4096 bits
Please specify how long the key should be valid.
    0 = key does not expire
    <n> = key expires in n days
    <n>w = key expires in n weeks
    <n>m = key expires in n months
    <n>y = key expires in n years
Key is valid for? (0) 0
Key does not expire at all
Is this correct? (y/N) y

[adkekisheva@adkekisheva Информационная безопасность]$ cd infosec
[adkekisheva@adkekisheva infosec]$ rm package.json
[adkekisheva@adkekisheva infosec]$ make COURSE=infosec
[adkekisheva@adkekisheva infosec]$ git add .
warning: You ran 'git add' with neither '-A (--all)' or '--ignore-removal',
whose behaviour will change in Git 2.0 with respect to paths you removed.
Paths like 'package.json' that are
removed from your working tree are ignored with this version of Git.

* 'git add --ignore-removal <pathspec>', which is the current default,
  ignores paths you removed from your working tree.

* 'git add --all <pathspec>' will let you also record the removals.

Run 'git status' to check the paths you removed from your working tree.

[adkekisheva@adkekisheva infosec]$ git push
warning: push.default is unset; its implicit value is changing in
Git 2.0 from 'matching' to 'simple'. To squelch this message
and maintain the current behavior after the default changes, use:

    git config --global push.default matching

To squelch this message and adopt the new behavior now, use:

    git config --global push.default simple

See 'git help config' and search for 'push.default' for further information.
(the 'simple' mode was introduced in Git 1.7.11. Use the similar mode
'current' instead of 'simple' if you sometimes use older versions of Git)
